Dear Sir/Madame:

RE: Feedback on Comments Received on DIS-16-02 Radiation Protection and Dosimetry

Thank you for the opportunity to provide feedback on comments received for DIS-16-02.

I fully support the following comment made by the Canadian Nuclear Association:

The timing of the proposed documents is premature because the new RP regulations have not been not been finalized. The stated purpose of the proposed documents is to "align with and provide relevant information to licences for meeting the new requirements resulting from the forthcoming amendments to the Radiation Protection Regulations." Since these have not been published, it is difficult to provide many specific comments on potential points that need clarification or further information in the proposed documents.

And I fully support the CNA's proposed change with regard to the above comment:

Industry suggests the CNSC defer the discussion on the proposed documents until the new RP regulations been adopted.

Sincerely,

J. Dovyak
