

# Certified Transport Packages and Special Form Radioactive Material

September 2017

## Certified Transport Packages and Special Form Radioactive Material

The Canadian Nuclear Safety Commission (CNSC) regulates the use of nuclear energy and materials to protect the health, safety and security of Canadians and the environment; and to respect Canada's international commitments on the peaceful use of nuclear energy.

Pursuant to the [\*Packaging and Transport of Nuclear Substances Regulations, 2015\*](#), the CNSC is authorized to certify transport package designs, special form radioactive material and low dispersion radioactive material. To achieve this, the CNSC has incorporated into its regulations, the International Atomic Energy Agency's transport regulations, namely the [\*Regulations for the Safe Transport of Radioactive Material, 2012 Edition\*](#), Safety Standards Series SSR-6.

Two of the most common certified designs in use today are Type B packages and packages designed to contain fissile material. Type B packages contain radioactive material that emit large activities of radiation and must be certified by the CNSC. Examples include packages designed to transport cobalt therapy sources and exposure devices.

The hazards are controlled by the strength of the package, which is designed to pass stringent impact, drop and puncture tests, an engulfing fire test, and immersion in water. Type B packages may be constructed of steel with depleted uranium or lead as shielding. The weight can vary from about 25 kg to 35 tonnes, or more, depending on the radioactive activity of the material it is designed to contain. The shape of the package can also vary.

The CNSC also revalidates package design certificates that are issued by other countries. Occasionally, special arrangements may also be approved by the CNSC, under which consignments that do not satisfy all the applicable requirements may be transported.

What follows is the list of all special form radioactive material and package designs that are certified by the CNSC for use in Canada, as of September 8, 2017. Those highlighted in red color font will expire within the next 12 months. Those highlighted in blue color font indicate expired certificates for which an application for certification is pending a decision.

### Valid Special Form Certificates
