## Vessel / hopper entry – stay safe on the job every day

**Follow procedures submitted to and approved by the Canadian Nuclear Safety Commission.**

The CNSC reviews and approves vessel/hopper entry procedures and verifies they are implemented at the worksite.

### **Check all radiation devices**

- Identify all radiation devices by locating the radiation warning signs posted near the radiation devices and every access point.
  
- Ensure every radiation device is properly locked out; verify with a calibrated radiation survey meter and record values.

### **Use a calibrated radiation survey meter**

Measure the dose rates inside where the work will be performed and record the values.

### **Ensure all workers are:**

- fully trained and qualified.
- informed of dose rates.

### **Maintain, for inspection by the CNSC, a record of:**

- job authorization
- all workers and their accumulated dose
- results of all radiation surveys

*The CNSC recommends having a radiation safety officer review the job hazard analysis prior to entry.*
